

# FOOT WASH STATION IN IROKO

**1m00 HIGH**

**The Foot Rinse Station 1m00 high is an alternative solution to the usual tall shower**

Iroko, an exotic African wood, has a nice amber colour in the sun. The structure is robust and finely proportioned, featuring a 16 cm-wide front panel, with the thickness of the wood being 24 mm. The 1m00 height provides an alternative solution to the classic overhead shower nozzle. It takes up little space and enables discreet installation. This station is fitted with a bib tap which acts as the water outlet and a hand-held shower for showering with. The water released by the small showerhead provides an extremely gentle sensation when it comes into contact with the skin, like refreshing foam.

The shower can be connected directly from behind or underneath to a garden hose or to an installed pipe system. This station can be fitted on request with a mixer on the front panel for regulating the temperature of the hand-held shower. Thanks to a hot water regulator to be installed upstream on the hot and cold water network, this shower, like all the products in the range, can be supplied directly with a mix of hot and cold water

Standard:  
Hand-held shower and foottap equipments
