

FOOT WASH STATION IN BRUSHED STAINLESS STEEL 316 L WITH A MIXER FOR HOT AND COLD

1m00 High

The Foot Wash Station 1m00 high is an alternative solution to the usual tall shower

We opted to use **316L quality stainless steel**, which can withstand a harsh marine environment, ruling out any risk of corrosion due to pitting. The brushed appearance sublimates the colour and the natural reflections given off by the stainless steel. A stainless steel structure offers a magnificent contrast in material with wood or stone and combines elegantly with the ambiances provided by contemporary structures. Rectangular in shape and measuring 100 mm x 50 mm, it takes up little space and enables very discreet installation. This station is fitted with a **mixer** on the front panel in order to enable direct control of the hand-held shower's temperature and a ¼-turn foot-rinse tap in a contemporary style, which acts as the water outlet. The water sprayed by the small showerhead provides an extremely gentle sensation when it comes into contact with the skin like refreshing foam.

The shower can be connected directly from behind or underneath to a garden hose or to an installed pipe system. Cold water is supplied for the foot-rinse tap and the temperature can be adjusted according to personal preferences for the hand-held shower.

Standard :

Mixer installed on the front, hand-held shower and foottap equipments

Option:

Grating in Iroko 75 x 80 cm with an aluminium frame

1m00 high
Structure : 100 mm x 50 mm
Mixer installed on the front
