

BRIDGE IN GALVANIZED STEEL ANTHRACITE GREY COATED

This shower, which is very discreet by nature, provides surprises right from the moment it is turned on. The water sprayed by the 3 showerheads, 2 of which are positioned on the sides, completely envelops the body and provides an extremely gentle sensation when it comes into contact with the skin, like a refreshing foam. The arc-shaped structure is made from anthracite grey thermo-lacquered galvanised steel tubing. Thermo-lacquering involves the application of thermo-hardening coloured power (which is baked in a high-temperature furnace), a surface treatment principle that provides an effective shield against corrosion and guarantees long-term protection. The Bridge shower is offered with an anthracite grey finish.

However, on an optional basis, any colour shade can be applied on request.

The shower is connected directly from the base to a garden hose or to an installed plumbing pipe system. The water intake is fitted with a high flow-rate quick connector so as to enable optimal water supply to the 3 outlets. It is needed to hook up the shower using a 25 mm diameter pipe.

Standard:

Grey anthracite colour coated

Option:

* Hot water regulator to be installed upstream on the hot and cold water network to supply the shower with a direct mix of hot and cold water (28/30°)

* Possibility of other colours shade finishes

Height of the structure: 2m10

Diam. of the structure: 36 mm

Interior space: 1 m

3 nozzles diam. 55 mm

Weight: 25 kg
