

QUARTZ IN GALVANIZED STEEL

This shower is proposed in all the colours of the RAL colour chart

Industrial design has played an important role in a number of environments for some years now. Its sober nature and its functional appearance constitute its main advantages. It is in line with market trends, recent materials and new ideas, enabling objects to be designed, which match the tenor of the times.

Following on in this spirit, here is a model made of galvanized steel. Hot-dip galvanising is an efficient process which involves immersing the steel in a bath of molten zinc at a temperature of 450°C. This immersion treatment enables outstanding longevity, shock resistance, and remarkable protection from corrosion. Slim and elegant, the Quartz shower blends perfectly into the environment and is sure to appeal to devotees of this urban style. This shower's minimalist lines enable it to be installed discreetly anywhere in the garden. It is fitted with a small lime-resistant showerhead as well as a very functional ¼-turn tap. It is connected at the back of the base or via the ground directly to a garden hose or an installed pipe system

Standard :

In galvanized steel with a ¼ turn faucet, showerhead diam. 68 mm and base for installation on terrace 15 cm x 15 cm.

Optional fittings :

Hand-held shower equipment
Foot Wash equipment
All colours of the RAL colour chart
