

ZENITH IN GALVANIZED STEEL GRAPHITE GREY COATED

SOLAR SHOWER
NEW 2016

This solar shower was designed to allow an installation without constraint with regard to the sun exposure. The tank is stuck in the back, not embeded, thus there is a wide beam of exhibition around the shower.

- **Structure in galvanized steel graphite grey coated**
- **The structure can also be provided in brushed stainless steel 316L marine grade**

At the back, the shower is fitted with a matte-black stainless steel water tank which absorbs heat from the sun. The thermostatic tap installed at the top of the tank enables you to supply the shower directly with mixed water. Temperature adjustment is therefore out of the reach of children. Tank hot water capacity: 17 liters = 42 liters of mixed water. The floor attachment components are supplied in order to ensure perfect stability.

Total height: 2m07
Width of the facade: 10 cm
Aside width: 7,5 cm

Standard:
Without grating
Optional
Grating 75 x 80 cm in Iroko with an aluminium Frame anthracite grey coated
